

We would advise all residents, that the cleaning of the aerators (filters) to the taps in your apartment be undertaken every four months. This is to ensure that the scale, which builds up in the mixer taps in your kitchen and bathrooms, does not restrict the water pressure as well as harbouring any bacteria.

All residents should use the tool key provided on purchase with the apartment to remove the aerator without causing damage to the taps. Once the aerator has been removed from the tap, we would advise that you clean the aerator by placing it under running water and brush lightly with a small brush. The alternative is to purchase a cleaning fluid from Grohe Limited, which will also protect the chrome finish on the aerator.
